

HTML Terminologies in Short and Simple Language

1. HTML (HyperText Markup Language)

- It's the language used to create web pages.
- It uses tags to structure content.

Example:

```
<!DOCTYPE html>
<html>
  <head><title>My Page</title></head>
  <body><h1>Hello World</h1></body>
</html>
```

2. Tag

- A keyword inside angle brackets used to create elements.
- Usually has an opening (<tag>) and closing (</tag>) tag.

Example:

```
<p>This is a paragraph.</p>
```

3. Element

- Everything from start tag to end tag, including content.

Example:

```
<h1>This is a heading</h1>
```

4. Attribute

- Adds extra info to an element, written inside the opening tag.

Example:

```

```

5. Head

- Contains meta-information (like title, links, scripts).

Example:

```
<head>
  <title>My Website</title>
</head>
```

6. Body

- The visible content of the web page.

Example:

```
<body>
  <p>Welcome to my site</p>
</body>
```

7. Heading Tags (<h1> to <h6>)

- Used for titles and subtitles. <h1> is biggest, <h6> is smallest.

Example:

```
<h1>Main Title</h1>
<h2>Sub Title</h2>
```

8. Paragraph (<p>)

- Used for writing paragraphs of text.

Example:

```
<p>This is a paragraph.</p>
```

9. Link (<a>)

- Creates a hyperlink to another page or site.

Example:

```
<a href="https://google.com">Visit Google</a>
```

10. Image ()

- Displays an image. It doesn't need a closing tag.

Example:

```

```

11. List

- Used to display lists:
 - Ordered List () – numbered
 - Unordered List () – bulleted
 - List Item () – item in the list

Example:

```
<ul>  
  <li>Apple</li>  
  <li>Banana</li>  
</ul>
```

12. Table

- Used to display data in rows and columns.

Example:

```
<table>  
  <tr><th>Name</th><th>Age</th></tr>  
  <tr><td>Rabin</td><td>23</td></tr>  
</table>
```

13. Form

- Used to collect input from users.

Example:

```
<form>  
  <input type="text" placeholder="Your name">  
  <button type="submit">Submit</button>  
</form>
```

14. Div

- A container used to group elements.

Example:

```
<div>  
  <h2>News Section</h2>  
  <p>Latest updates here.</p>  
</div>
```

15. Span

- A small container used for inline text styling.

Example:

```
<p>I like <span style="color:red;">pizza</span>.</p>
```

16. Comment

- Used to write notes that won't show on the page.

Example:

```
<!-- This is a comment -->
```

Your list of HTML terminologies is clear, simple, and well-structured! Here's a slightly polished version for better readability and consistency:

HTML Terminologies in Short and Simple Language

1. HTML (HyperText Markup Language)

- The language used to create web pages.
- Uses tags to structure content.

Example:

```
<!DOCTYPE html>
<html>
  <head><title>My Page</title></head>
  <body><h1>Hello World</h1></body>
</html>
```

2. Tag

- A keyword inside angle brackets used to create elements.
- Usually has an opening (<tag>) and closing (</tag>) tag.

Example:

```
<p>This is a paragraph.</p>
```

3. Element

- Everything from the start tag to the end tag, including content.

Example:
